Technical Data Sheet

CITY Semi-Countertop Basin and Worktop

Whats in the box: 1x C3WTBAS

*Basin can be used Left or Right Handed
For Taphole *SEE INSTRUCTIONS*

Materials
Basin: Solid Surface

**Dimensions are subject to change, customers are advised to measure actual product before commencing installation.

Materials
Basin: Solid Surface

Solid Surface Information

Has many names including:
• Corian
• LG Hi-macs

A homogenous compound mixture of polyester and aluminium trihydrate (derived from a natural Bauxite ore). Basically the same material all the way through so can be cut and sanded back to perfect finishes. Aluminium trihydrate is Moulded, vacuum treated and then finished by hand to create a perfectly smooth matt finish which is highly dimensionally accurate. Can be sanded and refinished should any stains occur due to misuse. Can be patch repaired by simple sanding back since material is homogenous (same all the way through).

Material Benefits:
- Point impacts (255g ball dropped from 610mm)
- Stain resistant
- Colourfast
- Temperature resistance

FAQs

Q: What is the maximum water depth of the basin?
A: 94mm up to the overflow.

Q: Are there marks for taphole options.
A: No, see instructions & template.

Q: What configuration is the basin ready to be installed with?
A: Out of the box, the basin is ready to be installed with a maximum run size of 1500mm including 4 x 30mm filler panels (1620mm total with 10mm overhang each side). Any runs smaller, the basin may need to be cut to length. If 30mm design filler panels are not used, both ends of worktop will need to be cut to correct length. See illustration on Page 1.

Q: What size waste do I need?
A: A minimum 75mm length waste is recommended.

Q: What tools do I need to cut the worktop?
A: A 35mm holesaw is required to cut the tap hole. A quality circular saw/jigsaw/router is required for cutting and finishing the worktop. We recommend fine toothed wood blades. Additional sanding may be required. Please refer to product instructions for further details.

Q: Is a basin overhang required?
A: It is recommended to have a basin overhang to prevent water damage to furniture. If using the 1500mm with 4 design filler panel configuration without cutting worktop, there is a 10mm basin overhang on both left and right hand of basin. See illustration on Page 1

Note: Care should be taken when calculating configurations without filler panels.
